

## Error Code and Screen Changes

This document serves as a guide for DOL staff applying information-only edits for authorization.

Currently, Authorization edits are categorized as either "Forcible" or "Fatal." However, as of August 24, 2024, the Authorization screen will be updated to show information-only edits, which will not require user action to complete the authorization review process. These edits will be designated as informational and displayed with a "Y" value, indicating that no user action is required.

The **Error Codes** list page will contain a new column, "Informational," indicating whether a correction requires user action.

The values are:

- **Y:** The edit is informational. No user action is required.
- **N:** The edit is not informational. User action is required.

The Informational edits will be configured as follows:

- Fatal = N
- Forcible = Y

## Authorization Processing and Screen Changes

When an authorization is submitted, the system validates all the edits configured in the system, including “informational edits,” and posts the edits applicable to the authorization line or header.

The **Error List** section will contain a new column, **Informational**. The applicable values will be Y or N.

The OWCP System will continue to post the informational edits in the subsequent cycle if the edit is not forced. However, if the supervisor forces the edit for any reason, the OWCP System will stop posting it in subsequent cycles and mark the error status as **F** (Forced).

The OWCP System will not show information-only edits to the Provider or Auth Mailroom worker Profile.

Configure the following edits as **I** (Information-only) edits for authorization.

- 90965: Units not in the OWCP MUE range.
- 90966: Units not in the CMS MUE range.
- 40439: Procedure is part of a bundle or package and is not separately payable.

**Note:** Edits 90965 and 90966 are currently configured for the DEEOIC program, but they will be updated as Informational-edits and configured for both the FECA and DEEOIC programs.

**Note:** Edit 40439 is currently not configured for both FECA and DEEOIC programs but will be enabled for both programs as an Informational edit.
